

Installing FAXport clients on Terminal Servers (Citrix).

- 1) Set Terminal Server policies to allow faxprts.exe to run as a windows application on terminal clients
faxprts.exe is loaded on startup for all users and each terminal user must have faxprts.exe process running in order to print to FAXport printer.
- 2) Create a folder that is accessible to all users with security permissions of full control to Everyone.
For example: n:\temp
- 3) Run setup from FAXport version 9.03 installation CD and install FAXport client.
When installation finished choose exit, DO NOT restart the machine.
- 4) Open Regedit location:
HKEY_LOCAL_MACHINE\SOFTWARE\LANSOURCE\Printers
string: FaxTempTiffPath
change the value to the path name of the folder you had created, example: N:\temp
- 5) Open Regedit location:
HKEY_LOCAL_MACHINE\SOFTWARE\LANSOURCE\Attachment Manager
String: Local Storage Location
Change the value to the patch name of the folder you had created, example:
N:\temp
- 6) Restart the machine.
